Lingwood

Food Processing Machinery

The Problem :-

Norfolk based herb and baby leaf specialist The Herbarry wanted to find a cost effective way of increasing the output from their pre-packing operation. Filling and sealing product into pre-formed bags had always been a labour intensive and time consuming process for them. As business grew they could see that, without automating the process, the costs were spiralling and creating a competitive disadvantage. The Herbarry had seen many weighing and bagging systems but felt that they were all too large, expensive and inflexible for their growing and ever evolving business.

The Solution :- GKS CP 300 Vertical form, fill and seal bagger

The Benefits :-

- Compact space saving design means the CP300 can fit into the smallest of production areas
- Low infeed height enables operators to pre-weigh the product and drop it directly into the machine meaning product changeovers can be achieved in less than 2 minutes
- Former sets can be provided in a wide range of sizes and can be fitted without the need for specialist knowledge and tools
- The integral touch screen stores product information ensuring no mistakes when changing from one product to another
- The CP 300 can be manually fed with product or synchronised with a wide range of weighing and filling machines
- Highly flexible with options for Heatseal, Impulse seal, plain or printed films
- CP 300—efficient, flexible and cost effective
