

# Flexible & Friendly

The GKS-Compack CP300 is said to be a very compact vertical packaging machine suitable for packing various products. Being one of the smallest vertical form, fill and seal machines in the world, it can transform film into a bag by using a specially developed former set, finally the machine fills and seals the bag. The machine is being characterised by its flexibility and user friendliness. The integrated air unit powers the pneumatic seal system and if a higher capacity is needed, the machine can use external air. The GKS-Compack is suitable for packaging all types of free-flowing food and non-food products in heat seal materials such as polypropylene, up to a speed of 30 per minute. For further information, telephone Lingwood Wood Food Services on 01449 771202.
