

Dicer

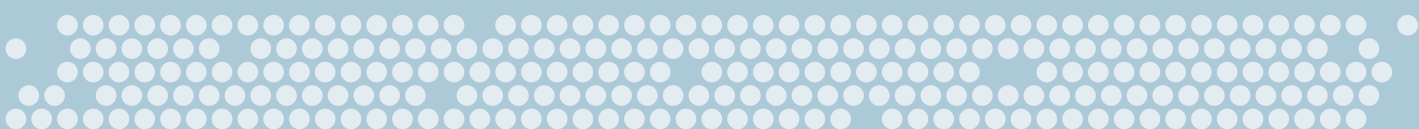

The Dicer cuts twelve half watermelons per minute into cubes, for example in 25 by 25 by 25 mm. The half fruits are placed manually on the conveyor belt and transported into the machine. Personal contact with the blades is excluded due to the safe construction.

The belt positions the fruit automatically in front of the first cutting unit. Here, the fruit is guided through a combination of horizontal and vertical blades. In the second cutting unit, the fingers pass sideways through a set of vertical blades.

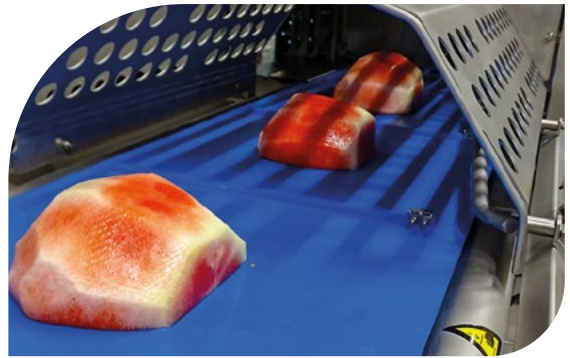

LONGER SHELF LIFE IS TOP OF MIND

The Dicer uses off-set knives. This prevents unnecessary juice loss, extends the shelf life and gives beautiful, sharply cut and evenly shaped cubes. Ready to freeze, dry, or use directly in for example fruit salads.

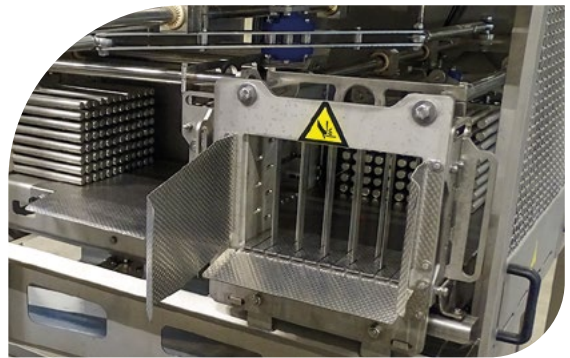

Features of the Dicer

- Capacity: 12 products per minute
- Size cubes: 25 x 25 x 25 mm (other sizes also possible)
- Maximum product size: 300 x 300 mm
- Maximum product height: 200 mm
- Machine dimensions: ± 3200 x 2300 x 1600 mm (L x W x H)
- Stainless steel motors
- Extremely safe and fast
- Easy access through pivotable belts and doors

Features of all our fruit-processing machines

- Careful treatment and processing extends the shelf life
- High processing capacity per unit of time
- Maximum yield per processed product
- Equals or better manual processing
- Visually attractive end product
- Easy to clean and to service
- Meet European guidelines for the food-processing industry in relation to hygiene and safety

Features of all ZTI smart machines

- Smart innovations that distinguish themselves in simplicity
- Simple and safe to operate
- Equipped with the latest techniques
- Optimal coordination of "mechanics" and "electronics"
- Attractive payback period for your investment
