

# The logical solution for your challenges

ZTI focuses nationally and internationally primarily on the flower, vegetable and fruit-processing industry. Smart innovations in industrial processes allow us to make manual repetitive work easier, safer, more sustainable and more efficient. But we are active in other sectors, too.

## SPECIAL SOLUTIONS

In addition we are also active in the seed sector, automotive industry, healthcare and other industries. By listening carefully and thinking creatively together with customers, we can come up with smart and unique solutions. The essence of the solution can often be found in its simplicity.

Our smart machines do more with less. Robotics and vision technology are also making it technically feasible to delegate decisions to machines. So, not just a smart solution; the machines themselves are also becoming increasingly smarter.

## WHAT CAN WE DO FOR YOU?

ZTI is active in a wide range of operational sectors, but primarily focused on the fruit, vegetable and flower processing industry. The machines we have developed are generally production manufactured, although we are sometimes called upon to make a unique bespoke item.

Do you have a particular challenge for us, or are you interested in our ideas and solutions? We would be happy to discuss this with you. Visit [zti.nl](http://zti.nl) for contact information and further information about our smart machines.

Think logical, think ZTI

# A selection of our portfolio

## DESTEMMER

Picking grapes, dates and cherry tomatoes with the destemmer surpasses manual processing. The machine is unique because, like no other comparable machine, it can pick the fruit from the stem with a rotating movement.

## CABBAGE CORER

The Cabbage Corer removes the hard core of drumhead cabbage. Adjustable bores and bore depths prevent waste. Once that has been removed, the remaining 'clean' cabbage is ready to be processed.

## CITRUS & KIWI PEELER

The Citrus & Kiwi Peeler is a fully-automatic peeler, corer, and 'top and tailer'. The machine is suitable for processing oranges, kiwi fruit and grapefruit. The peeling thickness can be adjusted to obtain the maximum yield.

## SORTING LINE

Sorts different types of vegetable accurately, carefully and quickly. Drumhead cabbage, pointed cabbage, pumpkin and broccoli, for instance. The machine is fully adjustable for each specific need.

## MANGO PEELER-DE-CHEEKER

The mango is a very tender fruit and so demands special care in processing. Our Mango Peeler-de-Cheeker holds the fruit by the stone during the peeling process, cutting the fruit lengthways. This leaves the pulp intact. The result is better than for a hand-peeled mango.

## SUPER SEALER

The quickest sealer of cut-flower packaging is the Super Sealer. The wrapping for roses (including those for import) in particular make this a popular choice of flower-packaging machine.

## FRUIT CUTTER

The Fruit Cutter slices peeled or unpeeled fruit with minimal external force. The machine is suitable for slicing and cutting pineapple, melon or peeled mango halves. It is also possible to cut rectangles (fingers) or ovals.
